

## APPENDIX 1

### Results of the ICPMS analysis of the bulk soil samples, as compared to mean concentrations in other media

Sample:	PSg1	RD1g	RDT1g	RDT2g	RDT3g	RDT4g	RSH1g	ZBB1g	X <sub>g</sub> <sup>1</sup>	coals <sup>2</sup>	shales <sup>3</sup>	CC <sup>4</sup>	PM <sup>5</sup>	soils <sup>6</sup>	EC <sup>7</sup>	Threshold <sup>8</sup>

<sup>1</sup> – geometric mean; <sup>2</sup> – mean USCB coal concentrations (from: Parzentyń et al., 1999; Lewińska-Preis et al., 2008; Juda-Rezler and Kowalczyk, 2013; Smoliński et al., 2014; own data); <sup>3</sup> – mean USCB shale concentrations (from: Parzentyń, 1994; Parzentyń et al., 1999; Kokowska-Pawlowska, 2015; own data); <sup>4</sup> – Coal Clarke values (Ketris and Yudovich, 2009); <sup>5</sup> – geometric mean for local heap pyrometamorphic rocks ( $n = 8$ ; Kruszewski, 2018); <sup>6</sup> – typical mean soil concentrations (Kabata-Pendias and Pendias, 1989 – most elements; Mocek, 2015 – Ca, K, Mg, Na, P, and S data); Co, Cu, Fe, Mn, Mo, Zn – additional data from Mocek (2015); Na – additional data from IUNG – [http://www.gios.gov.pl/chemizm\\_gleb/](http://www.gios.gov.pl/chemizm_gleb/); <sup>7</sup> – mean Earth's Crust (including continental crust and igneous rocks) values (from Parker, 1967); <sup>8</sup> – soil threshold values (from Mocek, 2015; zinc data: toxic concentrations given in parentheses); <sup>9</sup> – outstanding values (as compared to EC) are given in bold, while the highest-observed ones are underlined; <sup>10</sup> – given by yearly input/output from various soils; <sup>11</sup> – data for plant-available K: 0.01% (geometric mean basis); <sup>12</sup> – data for <8 samples cases given in brackets; <sup>13</sup> – maximum allowable values according to Polish Environment Ministry Ordinance of 05.09.2016
